

Student Placement Tracker

Project Overview

Student Placement Tracker is a **Java console-based mini project** developed to **track and manage placement details** of students in a structured way. It uses **Object-Oriented Programming (OOP)** concepts, **file handling**, and **data structures** like ArrayList to simulate a real-world use case for students appearing in placement drives.

Project Objective

The goal is to help students or colleges:

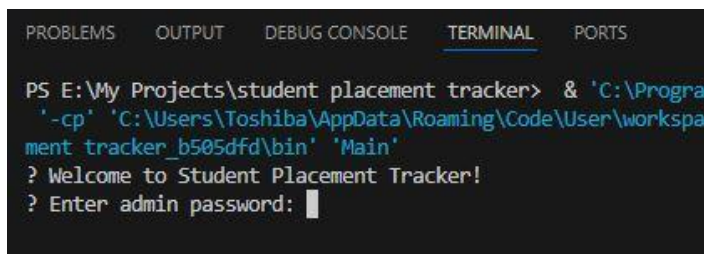

- Maintain a list of placement opportunities
- Track application statuses
- Get statistics and performance insight
- Export data for reporting and analysis

Tech Stack Used

- Programming Language: **Java**
- Concepts: **OOP, File I/O, Data Structures**
- Tools: Java Compiler (javac), Command Line (cmd)
- Optional Future Scope: Can be upgraded to Java Swing or Spring Boot Web App

Password Protection

- When the program starts, it asks for a **password**.
- Only after entering the correct password (admin123), the menu is shown.
- Maximum **3 attempts allowed**.
- ✓ **Why:** Prevents unauthorized access to placement data.

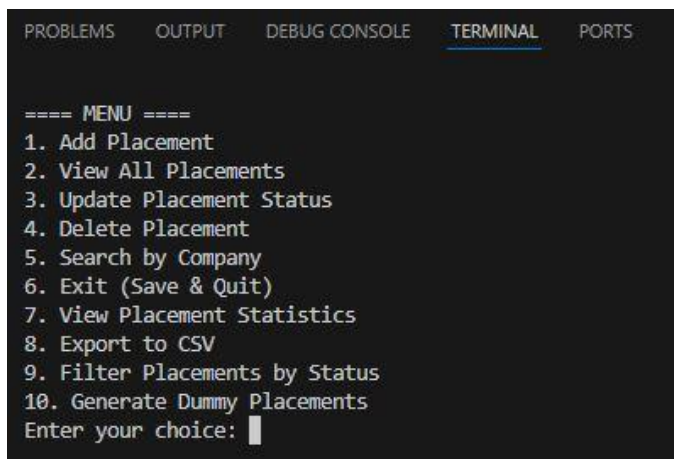

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

PS E:\My Projects\student placement tracker> & 'C:\Program Files\Java\jdk-11.0.2\bin\java.exe' ^
'-cp' 'C:\Users\Toshiba\AppData\Roaming\Code\User\workspace\student placement_tracker_b505dfd\bin' 'Main'
? Welcome to Student Placement Tracker!
? Enter admin password: |
```

Main Menu Options

- The program shows this interactive menu:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

==== MENU ====
1. Add Placement
2. View All Placements
3. Update Placement Status
4. Delete Placement
5. Search by Company
6. Exit (Save & Quit)
7. View Placement Statistics
8. Export to CSV
9. Filter Placements by Status
10. Generate Dummy Placements
Enter your choice: |
```

Add Placement

- details:
- Company Name
- Job Role
- Package (in LPA)
- Interview Date (dd-mm-yyyy)
- Status (Applied, Selected, Rejected)
- Stored in an ArrayList<Placement>, and saved to a file on exit.

```
--- Add Placement ---
Enter company name: TCS
Enter job role: front end developer
Enter package offered (in LPA): 4.5
Enter interview date (dd-mm-yyyy): 26-06-2025
Enter status (Applied/Selected/Rejected): Applied
? Placement added successfully!
```

View All Placements

- Prints all placement records in a tabular format like:

```
--- All Placements ---
Company      Role      Package  Interview Date  Status
-----
TCS          front end developer 4.50      26-06-2025     Applied
Google       SDE       8.65      20-06-2025     Selected
```

Update Placement Status

- Update the interview status for any company.
- ✨ Useful when you're selected/rejected or still waiting.

Delete Placement

- Removes a placement entry by company name.
- Helps you clean up old or incorrect data.

Search by Company

Searches placements by **company name (partial or full)**.

- ✓ Case-insensitive
- ✓ Displays all matching records

View Placement Statistics

Gives a performance dashboard:

- Total placements
- How many **Selected**
- How many **Rejected**
- How many still **Applied**
- Average package of selected offers

 Helps in understanding placement journey progress.

```
? --- Statistics ---  
Total Placements: 2  
? Selected: 1  
? Rejected: 0  
? Applied: 1  
? Avg. Package (Selected): 8.65 LPA
```

Export to CSV

Writes all placements to placements.csv in this format:

| Company | Role | Package | Interview | Status |
|---------|-------------|---------|-----------|----------|
| TCS | front end c | 4.5 | ##### | Applied |
| Google | SDE | 8.65 | ##### | Selected |

Can be opened in Excel, Google Sheets, or submitted as a report.

Filter by Status

Lets you view placements by:

- Only **Selected**
- Only **Rejected**
- Only **Applied**

Makes it easier to focus on specific goals.

```
? Filter by Status
Enter status (Applied/Selected/Rejected): Applied
Company      Role      Package  Interview Date  Status
-----
TCS           front end developer 4.50    26-06-2025    Applied
```

Generate Dummy Data

Auto-generates 10 realistic sample entries to test the app.

Useful for demo, practice, or debugging without manual input.

Concepts Used

| Topic | How it's used |
|---------------------------|------------------------------------|
| Java OOP | Classes (Placement, FileManager) |
| Encapsulation | Getters/Setters in Placement.java |
| ArrayList | Storing dynamic list of placements |
| File Handling | Save and read placement data |
| Scanner | Input from user |
| Loops/Conditions | Menu navigation & input validation |
| Exception Handling | File errors, input errors |

Additional Scope (Future Add-ons)

| Idea | Description |
|----------------------------------------------------------------------------------------------------|----------------------------------------|
|  GUI | Build Java Swing interface |
|  Web | Use Spring Boot or MERN for full-stack |
|  Android | Convert this to a mobile app |
|  Import | Import CSV to load data |
|  Encrypted save | Save data with password encryption |

Conclusions

*"My project is called the **Student Placement Tracker**, built entirely in Java using object-oriented programming. It helps students track their placement progress across companies by storing details like job roles, interview dates, packages, and statuses. I added practical features like password protection, CSV export, status-based filtering, and a statistics dashboard that shows selected, rejected, and applied counts along with average package. It also includes a dummy data generator for testing. The code follows a professional structure with modular classes and file handling, making it ready to scale into a GUI or web app. I built this to solve my own problem during campus placement prep — so it's a real-world, useful tool, not just a typical academic project."*
